<h1>Journal of Energy</h1>
Scientific Professional Journal of Energy, Electricity, Power Systems
Online ISSN 1849-0751, Print ISSN 0013-7448, UDK 621.31
Published by HEP d.d. and Croatian National Committee of CIGRE
Publishing Board
Robert Krklec, mr. sc. (president), HEP d.d., Zagreb, Croatia Božidar Filipović-Grčić, PhD (vicepresident), HRO CIGRE, Zagreb, Croatia
Editor-in-Chief
Goran Slipac, PhD , HEP d.d., Zagreb, Croatia

About the Journal of Energy

The Journal of Energy is a scientific and a professional journal with the first issue in 1951. Since 1966 (15th publishing year) The Journal of Energy has become the journal of Elektroprivreda Hrvatske (former name of the national power utility Hrvatska elektroprivreda i.e. HEP d.d.). In 1974 (24th publishing year) the Journal (under the name Energija) became the professional journal of Elektroprivreda Hrvatske, and since 1985 (35th publishing year) it was renamed to Journal of Elektroprivreda Hrvatske. In recent history, in 1990 it became the Journal of Energy.

Since 2010, the Croatian branch of CIGRÉ (HRO CIGRÉ) joined as a co-publisher of the Journal.

The Journal of Energy publishes original scientific and professional articles of a broad spectrum of interest in energy business, from specific technical problems to global analyses, aiming to help the advance of the state-of-the-art energy sector development. By 2009 six issues of the journal were published per year, with five chosen and reviewed articles in each issue. In the period between 2006 and 2009 all the articles in the journal were published bilingually, in Croatian and in English, with the circulation of 1,500 copies per issue.

Editorial policy

The Journal of Energy is a scientific and professional journal which covers the areas of the energy sector. The Journal of Energy publishes original scientific and professional articles with a wide area of interests, from specific technical problems to global analyses of processes in the energy sector. It covers a very broad range of topics relating to the electricity industry and the energy sector in general in a competitive and global environment.

The intention of Journal of Energy is to become a scientific and professional forum where these problems will be critically and constructively elaborated and where adequate solutions will be offered.

The Journal of Energy is especially interested in the following topics: energy sector in general, electricity production technologies, renewable sources and environmental protection; the use and development of energy equipment and systems; the electricity system operation in competitive market conditions; energy economics; construction of electric power facilities and plants; information systems and telecommunications; reengineering of business processes; electricity trade and supply, customer relations, knowledge management and training; European and regional energy legislation, initiatives and cooperation.

The views expressed in articles are the authors' and not necessarily those of The Journal of Energy, HEP d.d., or HRO CIGRE.

The Journal of Energy is issued in form of a digital web magazine for readers by principle of free approach. We encourage prospective authors to follow our guidelines before submitting manuscripts.

Issue guidelines

Regular issue guidelines

All papers submitted for consideration in the regular issue will be sent for the standard peer review through the online procedure in two steps: initial prescreening and final screening. In both steps editors and/or reviewers could request potential revisions of manuscripts, until final acceptance or rejection decision. Whole correspondence related to above mentioned procedure will be held through email communication.

Guidelines for author's manuscript preparation is elaborated in separate document in form of template named "Guidelines for Authors". To obtain a copy, please go to the website of the journal.

Special issue guidelines

The Journal of Energy is open for special issues, which regularly encompass publishing of best-quality conference papers or papers invited at the initiative of experts or a group of experts from a specific field.

If the papers originate from a conference, symposium, colloquium or similar event, they need to be in line with the editorial policy of the Journal of Energy. Such papers should be recognized by experts from particular fields as papers with significant scientific and/or professional value. The initiative for issuing a special issue may be submitted by the Journal's editors or the experts outside the Editorial.

Proposals for the content of Special Issue should be submitted by the Editorial (or by Guest Editor specially assigned for a specific issue or area) and should include the following:

- A suggested title for the Special Issue (should not exceed 10 words)
- Proposed Aims and Scope, giving an overview of the Special Issue's intended focus and a list of topics to be covered
- In case of the participation of one or more Guest Editors, the Guest Editor managing the Special Issue will be provided with the list of Guest Editors, including their names, emails and affiliations of each of the Guest Editors
- A proposed timeline and schedule of Special Issue publishing

All papers submitted for consideration in the special issue will be sent for the standard peer review.

In case of the participation of one or more Guest Editors, the manuscripts submitted to the Special Issue will be checked by the journal's editorial office and sent to the Guest Editor.

As an exception, the Editor-in-Chief or Section Editors may invite papers from especially distinguished authors, in which case the manuscripts will not be peer-reviewed, but will be reviewed by at least two Editors.

Code of Ethics

The Editors of this publication are committed to the highest ethical and professional conduct:

- to promote the understanding of energy technology, markets, application, and potential consequences on the society,
- to avoid real or perceived conflicts of interests, whenever possible and to disclose them to affected parties, when they exist,
- to be honest and realistic in stating claims or estimates based on available data,
- to reject bribery in all its forms,
- to seek, accept and offer honest reviews of technical work and to credit properly the contributions of reviewers,
- to treat fairly all authors, regardless of factors such as race, religion, gender, disability, age or national origin,
- to avoid injuring others, their property, reputation or employment by false or malicious actions.

Ethic statements of the journal are based on the COPE's Best Practice Guidelines for Journal Editors.

Plagiarism

The Journal of Energy is committed to publishing only original material, i.e., material that has neither been published elsewhere, nor is under review elsewhere. Manuscripts that are found to have been plagiarized from a manuscript by other authors, whether published or unpublished, will be rejected immediately.

Duplicate Submission

If authors have used their own previously published work, or work that is currently under review, as the basis for a submitted manuscript, they are required to cite the previous work and indicate how their submitted manuscript offers novel contributions beyond those of the previous work. If these contributions are not significant in comparison with the previous work, the manuscript will be rejected immediately.

Citation Manipulation

Submitted manuscripts that are found to include citations whose primary purpose is to increase the number of citations of a given author's work, or of articles published in a particular journal, will be rejected immediately.

Improper Author Contribution or Attribution

All listed authors must have made a significant scientific contribution to the research presented in the manuscript and approved all its claims. It is important to list everyone who made a significant scientific contribution, including students and laboratory technicians.

Conflict of interest

Journal of Energy encourages all authors and reviewers to report any potential conflict of interests to ensure complete transparency regarding the preparation and reviewing the manuscript (research funding, grants, sponsorship, competing interests etc.). The conflict of interest exists when an author (or the author's institution) has financial (employment, consultancies, stock ownership, honoraria and paid expert testimony) or personal relationship, academic competition or intellectual passion that inappropriately influences his actions.

In order to avoid any potential doubt about the conflict of interest for the potential authors of articles that are employed by the publisher (Hrvatska elektroprivreda, and HRO CIGRE), these articles will be reviewed by international reviewers and any decision about publishing will be discussed in close cooperation amongst editor-in-chief and section editors and taken by a qualified majority vote.
